

Game Development Document

Game Name: <Brick Blast>

Logo / Cover Image:

Version: 1.0.0

Note: Edit freely. There is no wrong way to document your game.

1. Story & Gameplay

Story (Brief)

- Brick breaking game where the player is a stickman trying to get to the end of the dungeon.
- The player is a treasure hunter trying to get a good score. The gold will allow them to achieve their dreams, and so they enter the dungeon and meet the bricks.

Mind Map:

Brick breaking in order to gain treasure

V

Break the bricks and clear the level

V

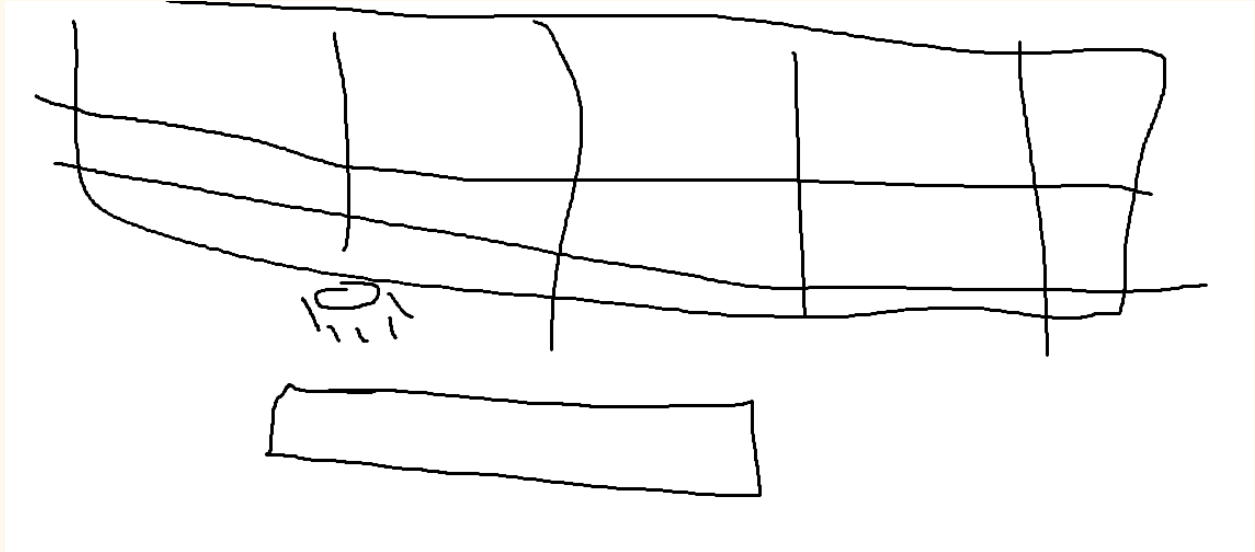

Game complete?

Story (Detailed)

The bricks must be broken! You are the paddle. The paddle demands the destruction of the bricks! I hate bricks, don't you? Play Brick Blast!!!!!!

The player is free to create their own scenario in their minds, but the main idea is that you are in a dungeon filled with bricks. The game itself is meant to channel a browser/flash game that one would play in downtime at work or at school.

Example Image:

Gameplay (Brief)

- Describe the core gameplay loop in 1-3 sentences.

Player breaks blocks sliding bar. Once there are no more bricks, the level is complete.

- Include main player actions, goals, and challenges.
Sliding the bar to bounce the ball and break the bricks to reach the end.

Gameplay (Detailed)

- Break down mechanics: movement, combat, puzzles, exploration, or crafting.

The key is the bar, it will move and guide the ball to break the blocks. The blocks will be broken, the level will be completed and the game can be restarted.

- Combine story and mechanics: how narrative drives gameplay and vice versa.

The player/character want to clear the dungeon to keep looking for treasure. The game could go on and on via reload.

- Include diagrams or flowcharts for player decision-making, level flow, or UI.

Example Diagram:

2. Assets Needed

Visual Assets

2D / 3D Textures

- Environment Textures: Acquired
- Game Element Textures: Acquired

Characters

- Character #1 - Paddle. The paddle is the MC and will destroy the bricks in the place of a human character.

Environmental Art

- Example: Dungeon background.

Ambient Sounds

- Not necessary? Will look into it.

Player Sounds

Character does not speak.

NPC Sounds

- Bricks.
-

3. Code / Scripting

Player Scripts

- Player Controller / Pawn

The paddle

- Combat / Interaction scripts

Bricks will break upon contact with the ball. Bricks will not come back.
Life system. (3?)

NPC Scripts

Make sure they are bricks.

4. Animation

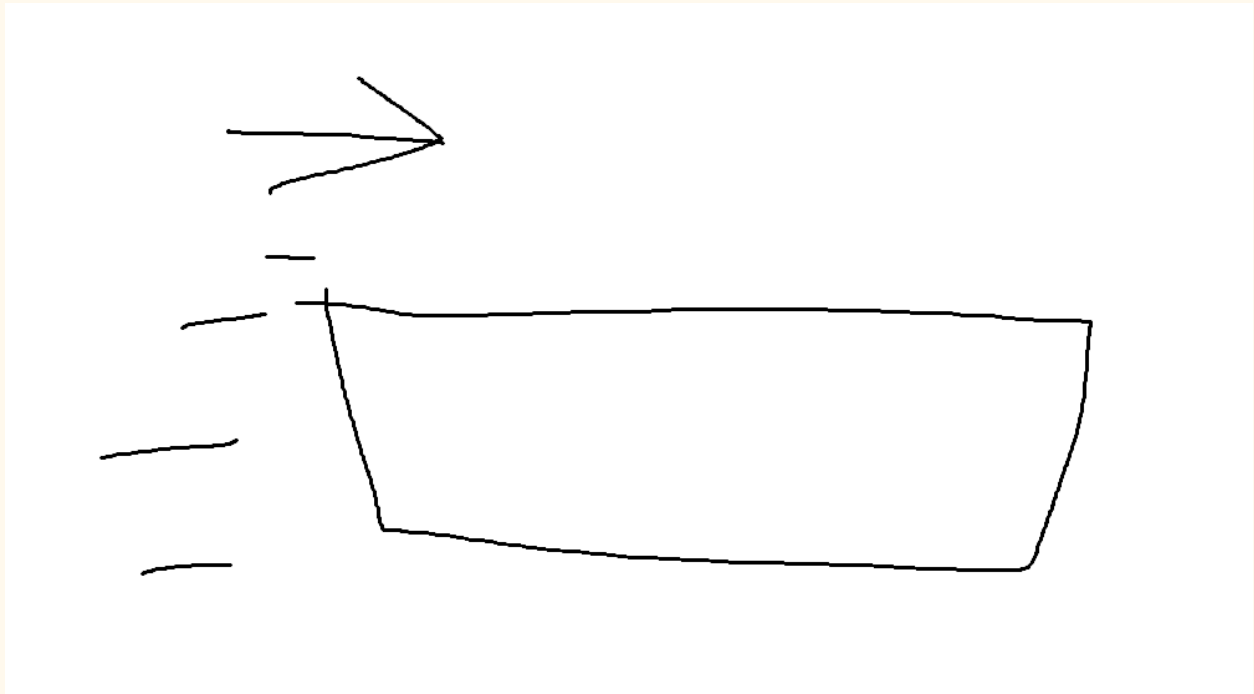

Environment Animations

- Moving platforms, doors, weather effects

Character Animations

- **Player:** Run / Jump / Attack / Idle
- **NPC:** Patrol / Attack / Idle / Special

Example Images:

5. Development Schedule

Object / Feature	Time Scale	Milestones
<Object #1> The game.	1 day	Made game skeleton. Background, paddle.
Game Works, now add more.	2 days (work)	Paddle moves. Paddle bounces ball.
Final	5 hours or so	Make walls. Ball bounces off walls, add bricks, bricks break. Add individuality not seen in the tutorial (it's not made by me) for assignment goal

Tip: Use a Gantt chart or Trello-style board for tracking progress visually.

6. Notes / References

- Concept inspirations, reference images, music, or games that influenced design

Pong.

- Links to documentation, tutorials, or software tools

TUTORIAL PLAYLIST:

<https://www.youtube.com/playlist?list=PLsvXBxgtEE5nGvERTEVgupe4jaiwiw-bm>

Optional Visual Layouts:

- Include sketches, level maps, UI mockups, and storyboard sequences for clarity.
